VACUUM PACKING MACHINES

The accurate vacuum for a perfect result

#FeelTheProduct

MULTIPLE
APPLICATIONS

Multiple applications of vacuum packing

Multiple applications

Packaging of raw foods

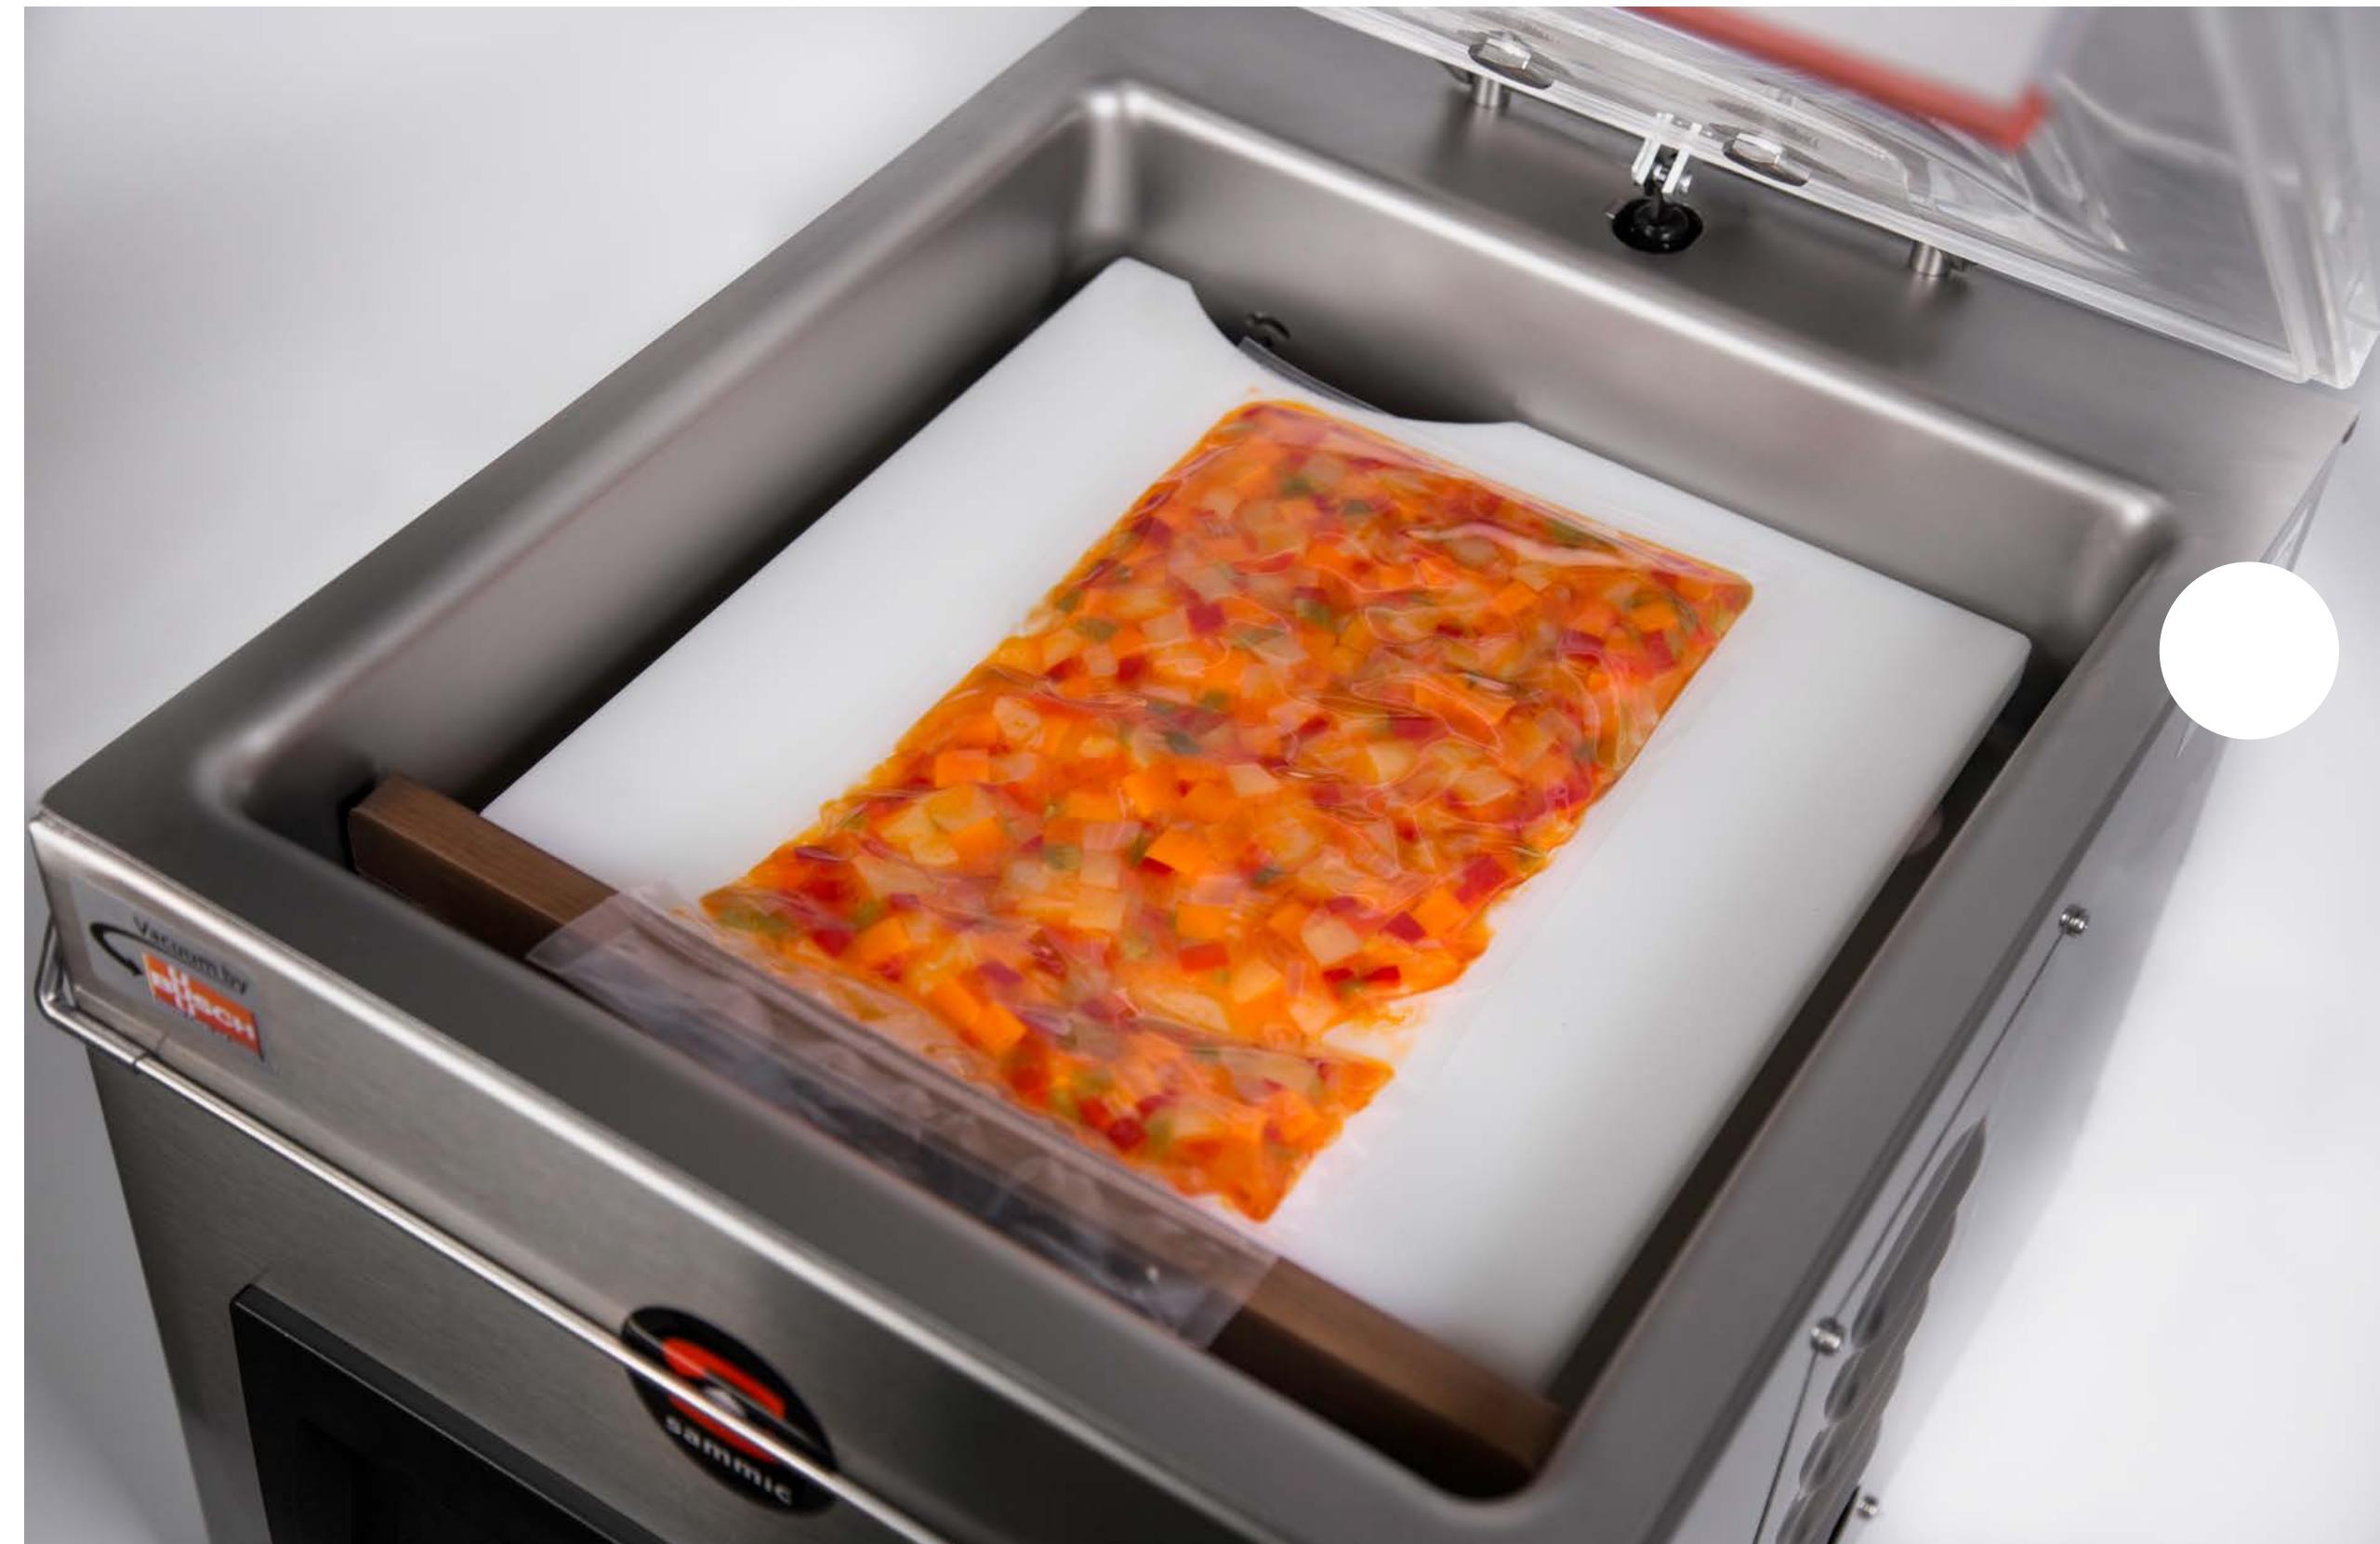

Vacuum packaging delays bacterial growth in raw foods, keeping their qualities intact for longer.

Multiple applications

The packaging of cooked products allows for rationed storage and quickness when serving.

Packaging of traditionally cooked products

Multiple applications

Sous-vide and low temperature cooking

Cooking using a low temperature is an increasingly popular culinary technique due to its numerous advantages. Vacuum packing the food is a required condition of this technique.

Multiple applications

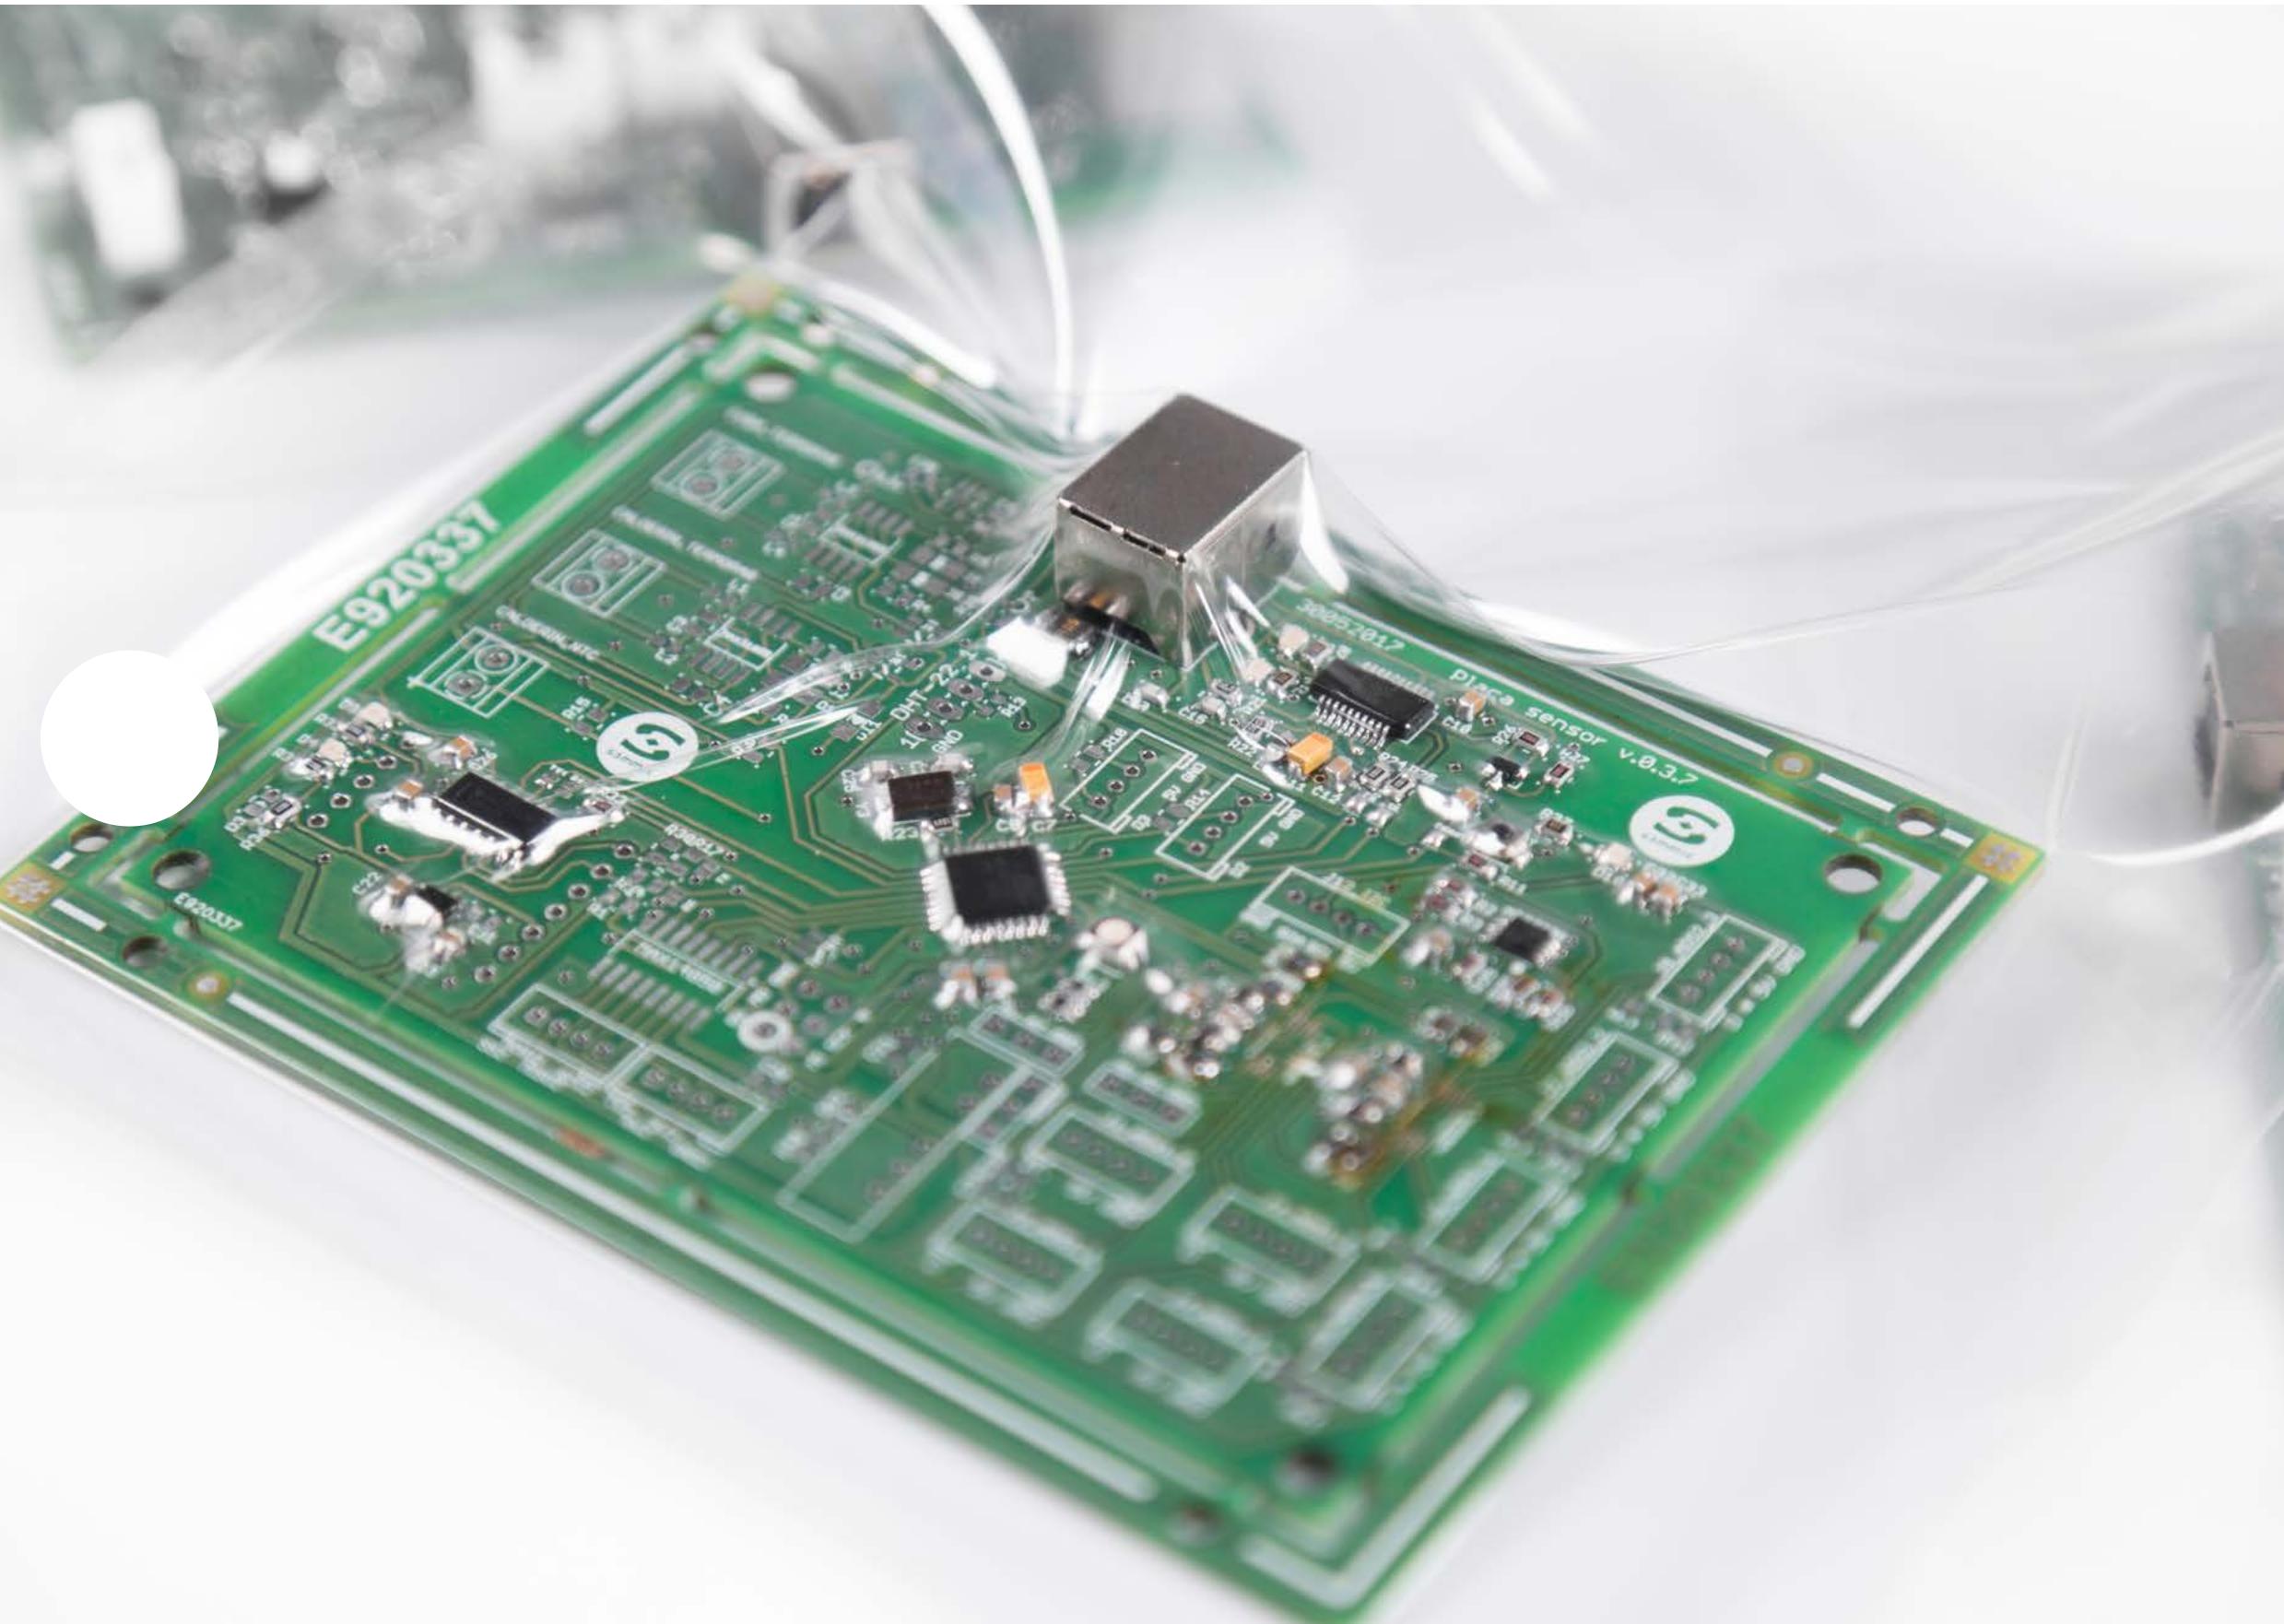

As there is no transfer of moisture between the product and the environment, freezing vacuum-packed products keeps the food under optimal preservation conditions.

Freezing of vacuum packed products

Multiple applications

Non-food

Vacuum packaging is not only useful for food but also for products that require special protection such as electronics, jewellery, cosmetics, etc.

The profitability and economy of vacuum packaging

Profitability and economy

Maximum yield of working hours

As it allows for working in advance, vacuum packaging allows for better organisation of the working day and making use of downtime to obtain the maximum yield from the personnel's working hours. This has an impact on the quality of the work, reducing wastage and improving the end result of the work performed.

Profitability and economy

Vacuum packaging allows for regular dosage control of the portions, which translates into accurate cost control.

Accurate cost control

Profitability and economy

Hygienic and rational storage

On being isolated from external contaminants, vacuum packed food is stored under the best hygiene conditions. Regular portioning allows for storage to be rationalised, allowing for better cost control and less waste.

Profitability and economy

Vacuum packaging allows for improving stock control and rationalising purchasing, taking advantage of the best purchase days. Moreover, larger orders can be placed since vacuum packing enables food to be stored for longer periods, thus reducing transport time and costs while strengthening your negotiating position with suppliers.

Optimisation of the purchasing process

Optimum vacuum

maximum control
& reliability

Optimum vacuum

The sequence is controlled by a high-precision microprocessor that controls the vacuum percentage in the chamber, thus enabling accurate and consistent results at all times and regardless of the quantity of product to be packaged.

Also, with the sensor an optimisation of working times is obtained: the pump works the necessary amount of time to obtain the desired result, therefore we achieve a reduction in working times which has an impact on the productivity of the business and prolongs the service life of the pump.

Vacuum controlled by sensor

Optimum vacuum

With control by sensor, better control when packaging liquids is achieved: Knowing the vacuum percentage at which a liquid boils when being packaged, with the control by sensor you can ensure it never exceeds this point.

Vacuum controlled by sensor

Optimum vacuum

Made of stainless steel

Both the body and the vacuum chamber are constructed with high quality stainless steel. The chambers are recessed in the 300 and 400 series.

Optimum vacuum

The cover is transparent and highly durable with machined and polished edges. The cover is fitted with gas dampers with final damping to ensure smooth opening.

Cushioned cover

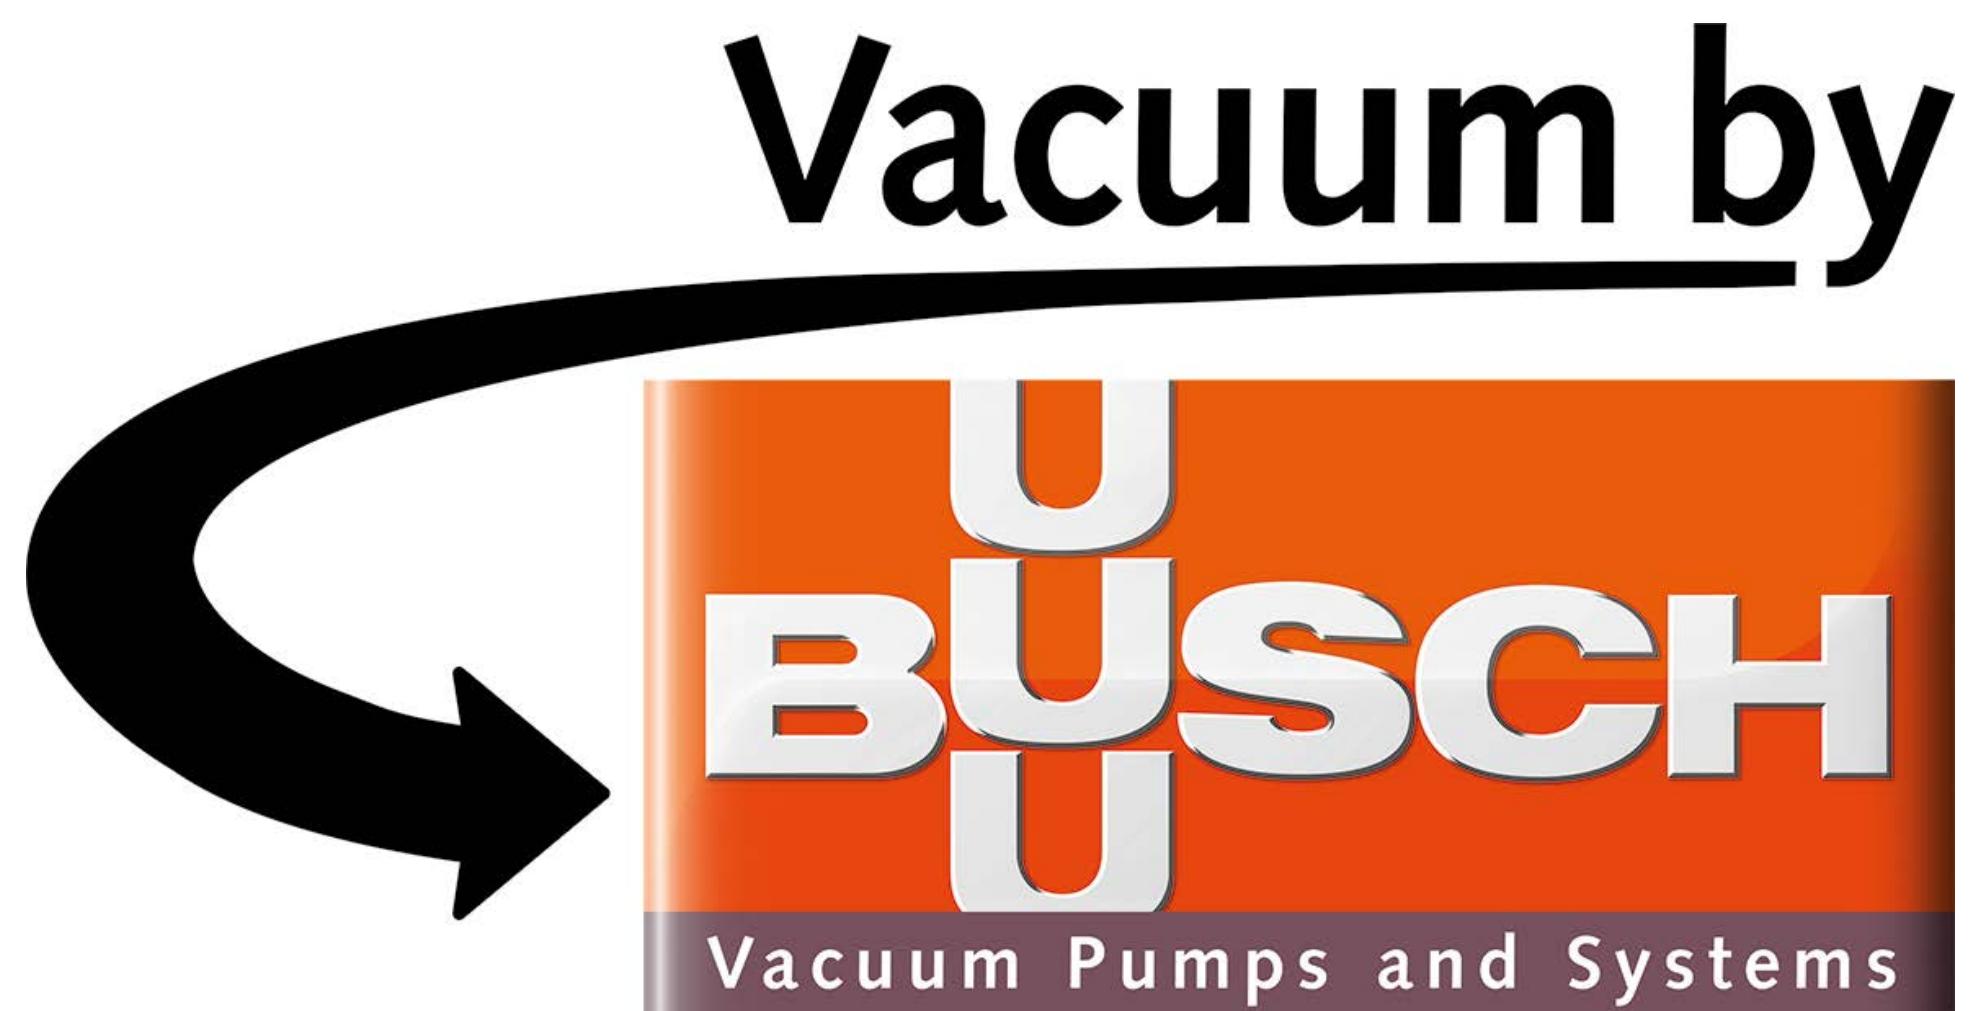

Optimum vacuum

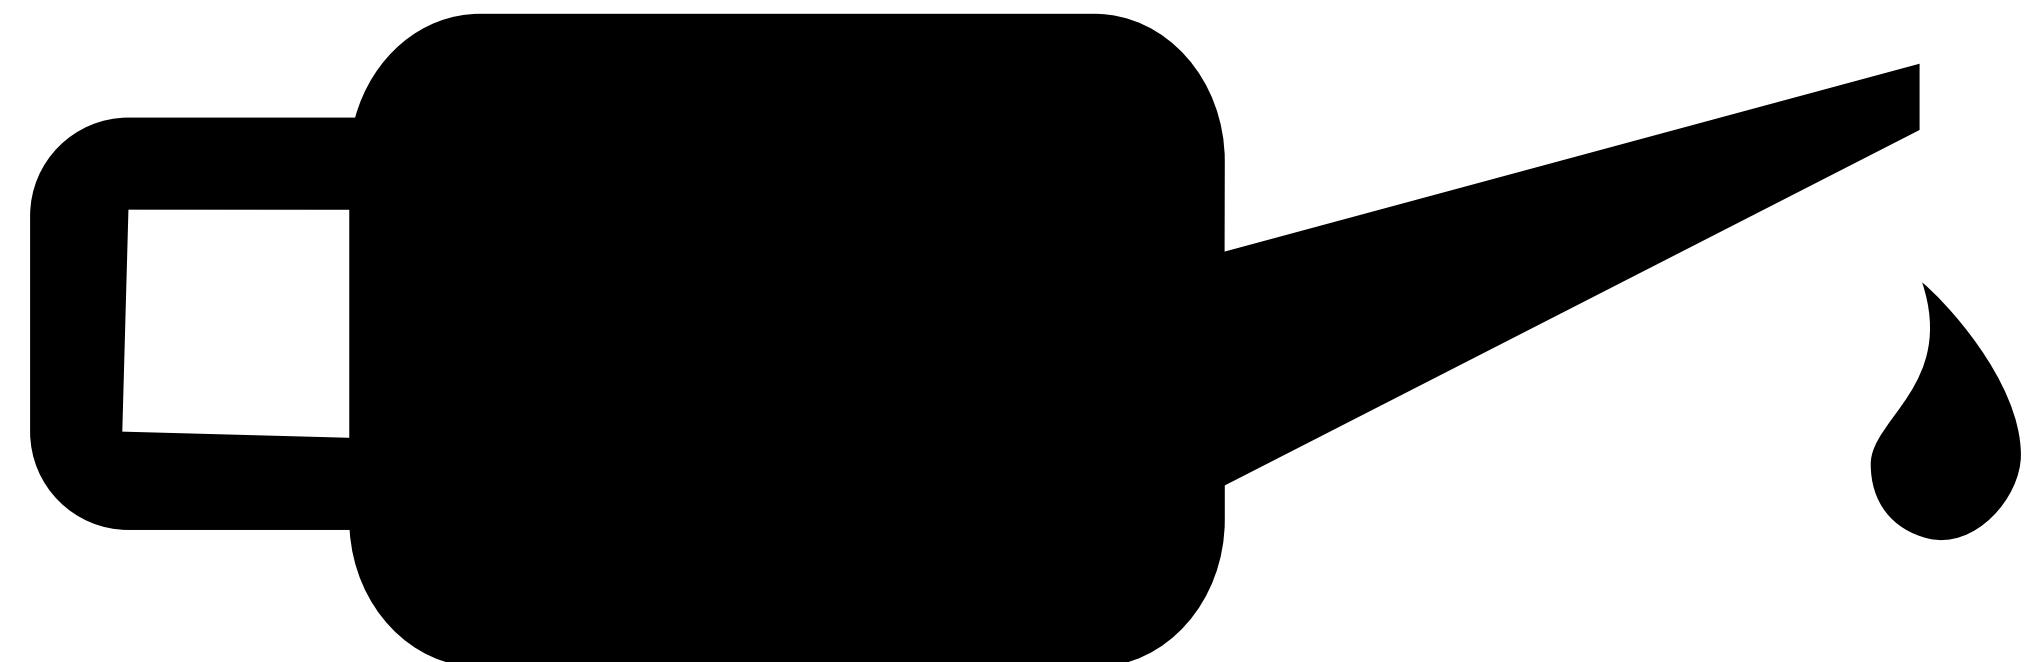

All of the models in the SE range are equipped with robust, reliable, high quality Busch pumps. The Busch pumps can be used continuously and guarantee a maximum vacuum and a long service life.

In addition, all of the Sammic vacuum packaging machines feature advanced functions to significantly prolong the life of the vacuum pumps.

Vacuum by Busch

Optimum vacuum

Vacuum by Busch

Oil-dry

All models have a pump drying programme, which allows for them to be kept in an optimal condition.

Hour counter

The hours use counter display for oil changing helps improve the durability of the machine.

Optimum vacuum

It is possible to programme up to 10" of additional vacuum if you have selected a 99% vacuum. Vacuum PLUS enables you to extract a higher quantity of air from the main ingredient. This function is ideal for vacuum cooking as, during cooking, there is no air inside the bag. In cutting-edge cuisine, this function allows us to obtain surprising results such as transparencies and osmosis.

Vacuum PLUS

Optimum vacuum

Double seal

All of the models of packaging machines are equipped with bars fitted with dual bead sealing, guaranteeing perfect sealing of the bag at all times. Also, from the 400 series onwards, the bars are fitted with curved elements that enable removal of remains of the product and ensure that the sealing is hermetic.

Optimum vacuum

Stop Button

With a STOP button, at any time, you can end the vacuum stage and pass on to the next phase.

Advanced
.....
performance
.....
in all models
.....

Advanced performance

Controlled decompression

Thanks to the impulse-controlled decompression, once the bag has been sealed, the air re-enters the chamber little by little. This prevents any damage to the product or the bag.

The function of controlled decompression is especially useful for products with sharp edges or in the case of soft or fragile products.

Advanced performance

The microprocessor enables the pre-setting of the lowest appropriate level of vacuum for packaging liquid at room temperature without the risk of splashing or spillage.

Safety when packaging liquids

Advanced performance

Vac-Norm ready

All the models come prepared for connecting the Vac-Norm external vacuum kit, which allows the vacuum to be made in tubs especially designed for the purpose instead of using vacuum bags. The control of the sensor and automatic decompression for removal of the tube at the end of the sequence prevents loss of the vacuum through the valve at the end of each cycle

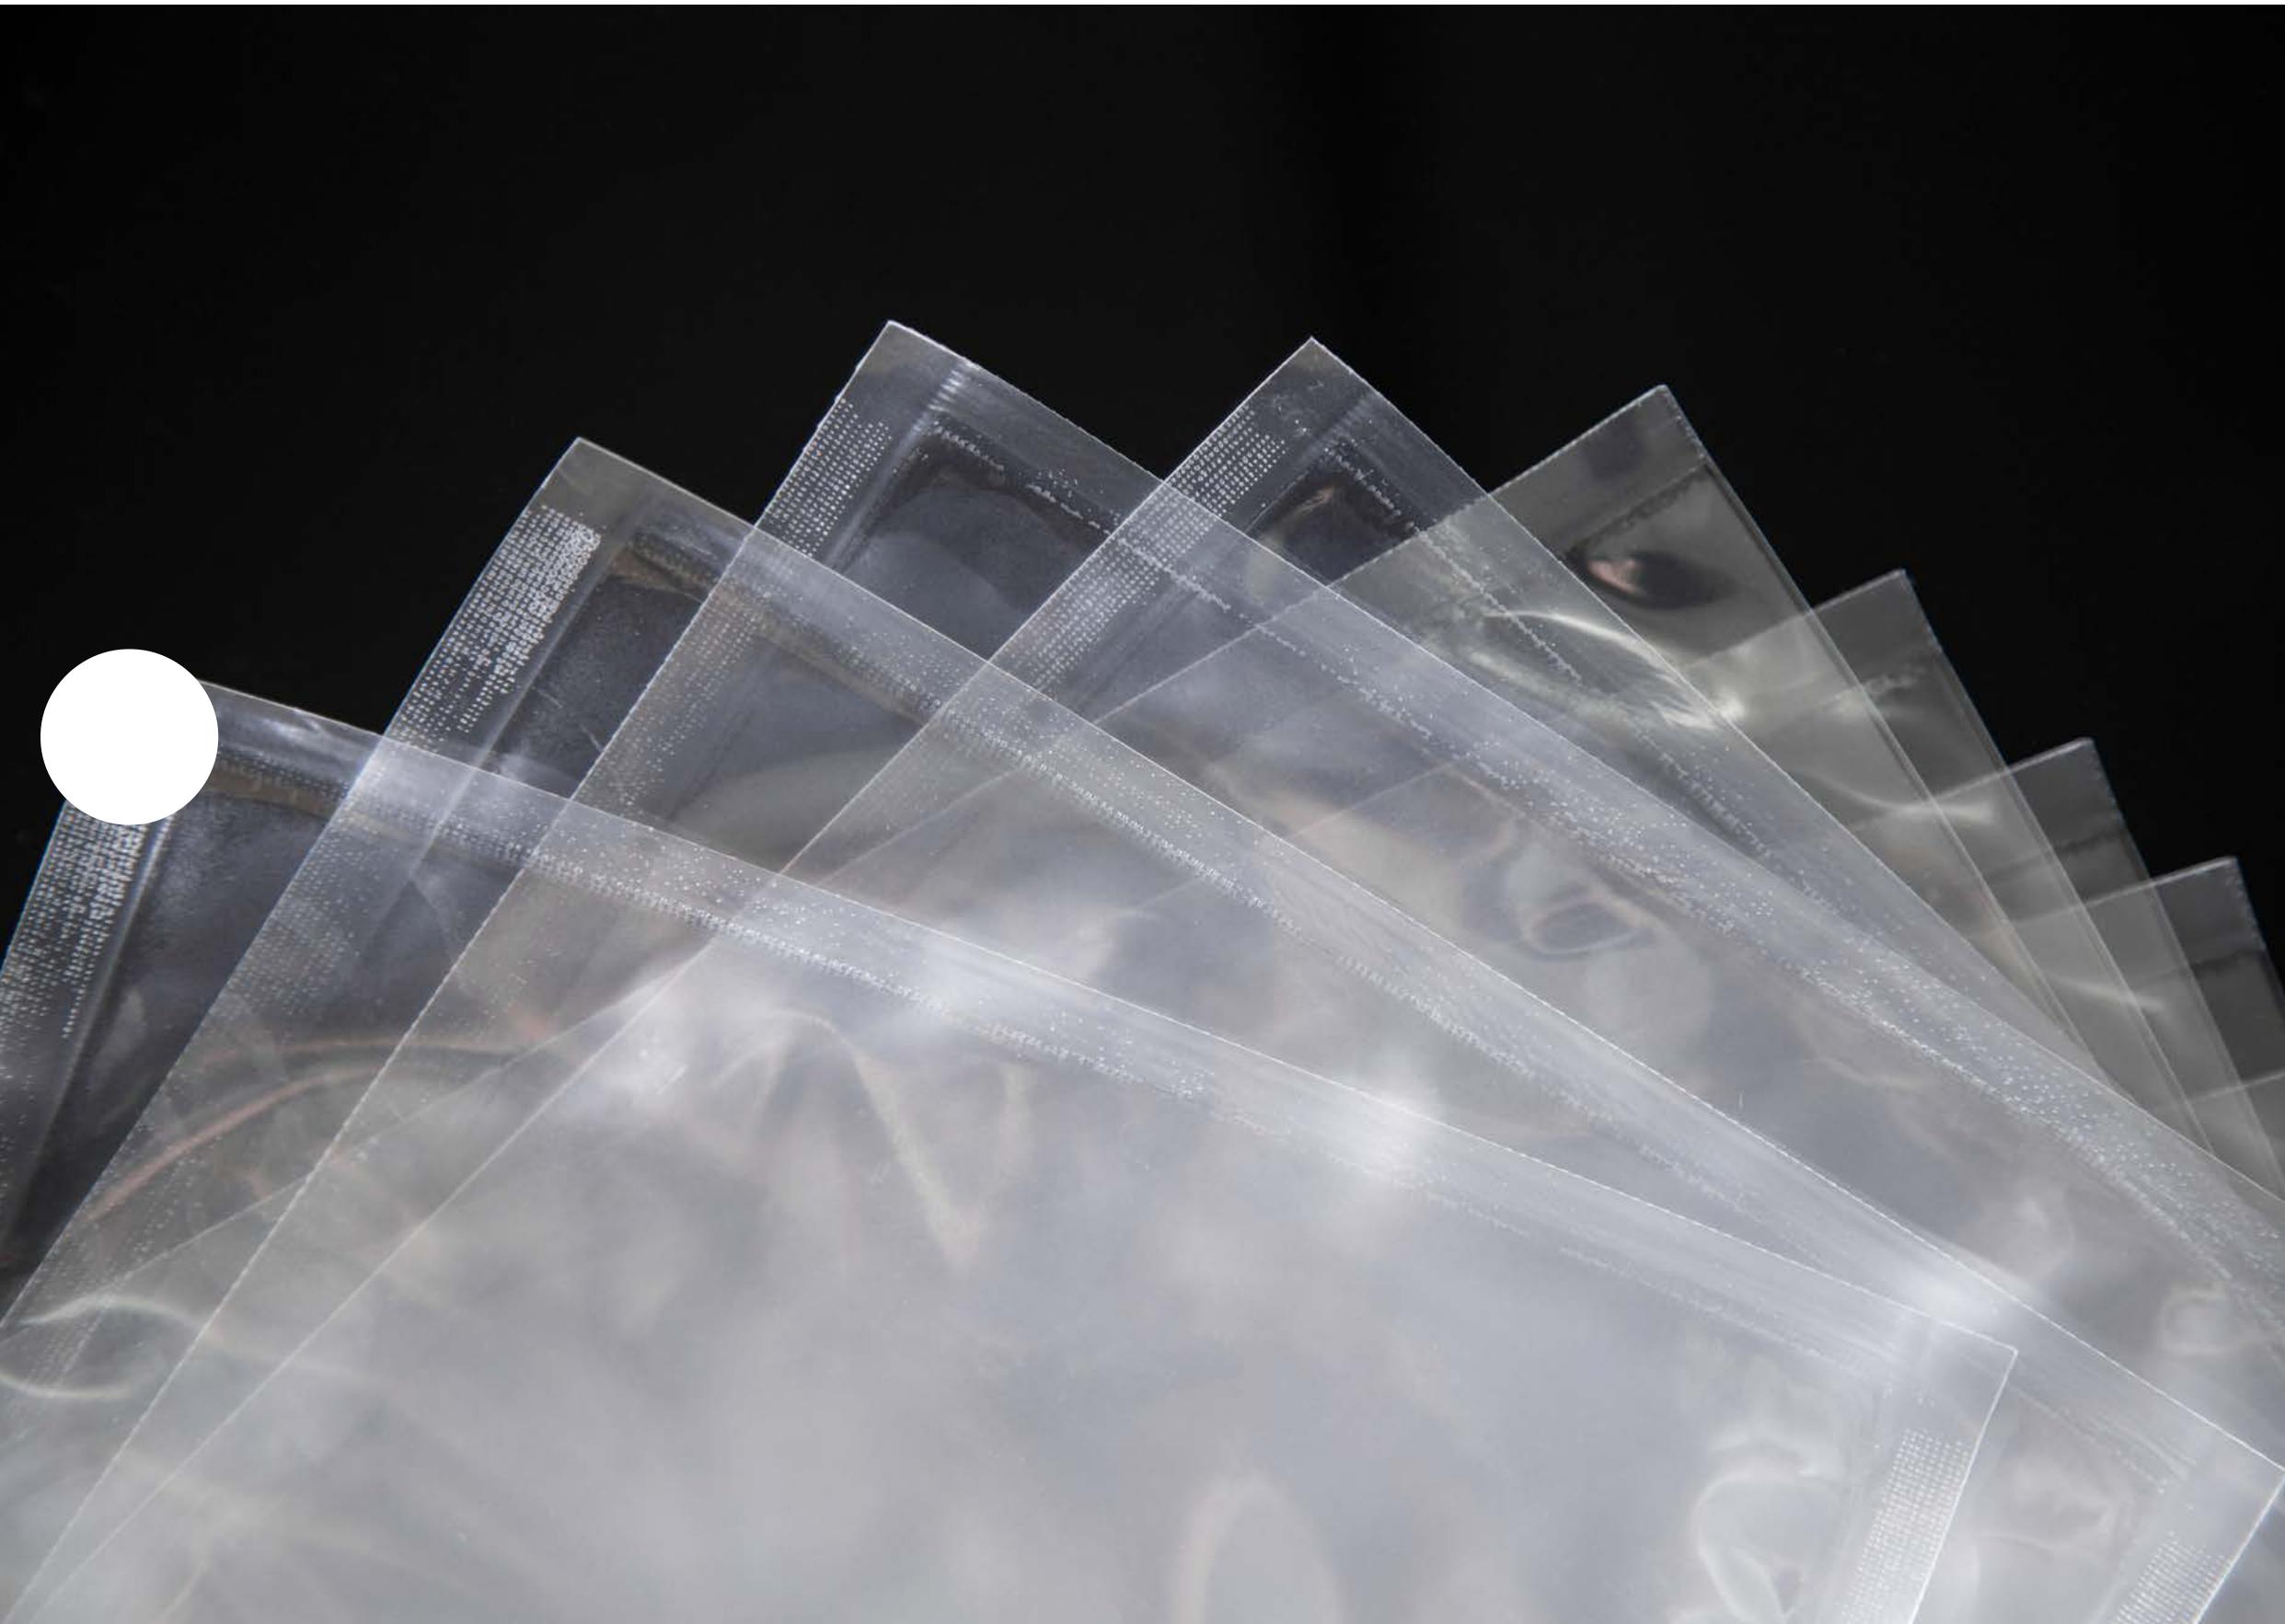

Advanced performance

The “pause” button enables “freezing” the vacuum phase and re-starting from the same point. This is especially useful for marinating different products in a recipe, accelerating the blending or curing of products, flavouring products or tenderising meat.

“Pause” button for marinating food

Advanced performance

Bag sealing programme

All of the vacuum packers allow for performing packaging cycles only for sealing bags. It is only necessary to enter a lower vacuum when programming the sequence.

Advanced performance

Safety for the user

All of the models are equipped with a safety system with protection against exceeding maximum operating time and vacuum failure.

Hygiene guarantee

Hygiene guarantee

NSF: recognised quality

The Sammic packaging machines are certified by NSF International in accordance with the NSF/ANSI standard which is, in itself, a guarantee of hygiene.

Consult models.

Hygiene guarantee

The cable-less sealing bar enables an obstacle-free chamber and makes it easier to clean and maintain in satisfactory hygiene conditions.

Cable-less sealing bar

Hygiene guarantee

Recessed tank

The 200, 300 and 400 series are equipped with embedded 304 stainless steel vacuum chambers free of sharp edges and with rounded contours to facilitate cleaning.

Accessories
for any
requirement

Accessories

Vacuum packing bags

Vacuum bags of different sizes,
available in practical packs.

Accessories

Vac-Norm external vacuum kit

For carrying out the vacuum in containers especially designed for the purpose.

Accessories

Vac-Norm containers

Top quality tubs and lids for carrying out the vacuum without a bag, using the Vac-Norm external vacuum kit.

Accessories

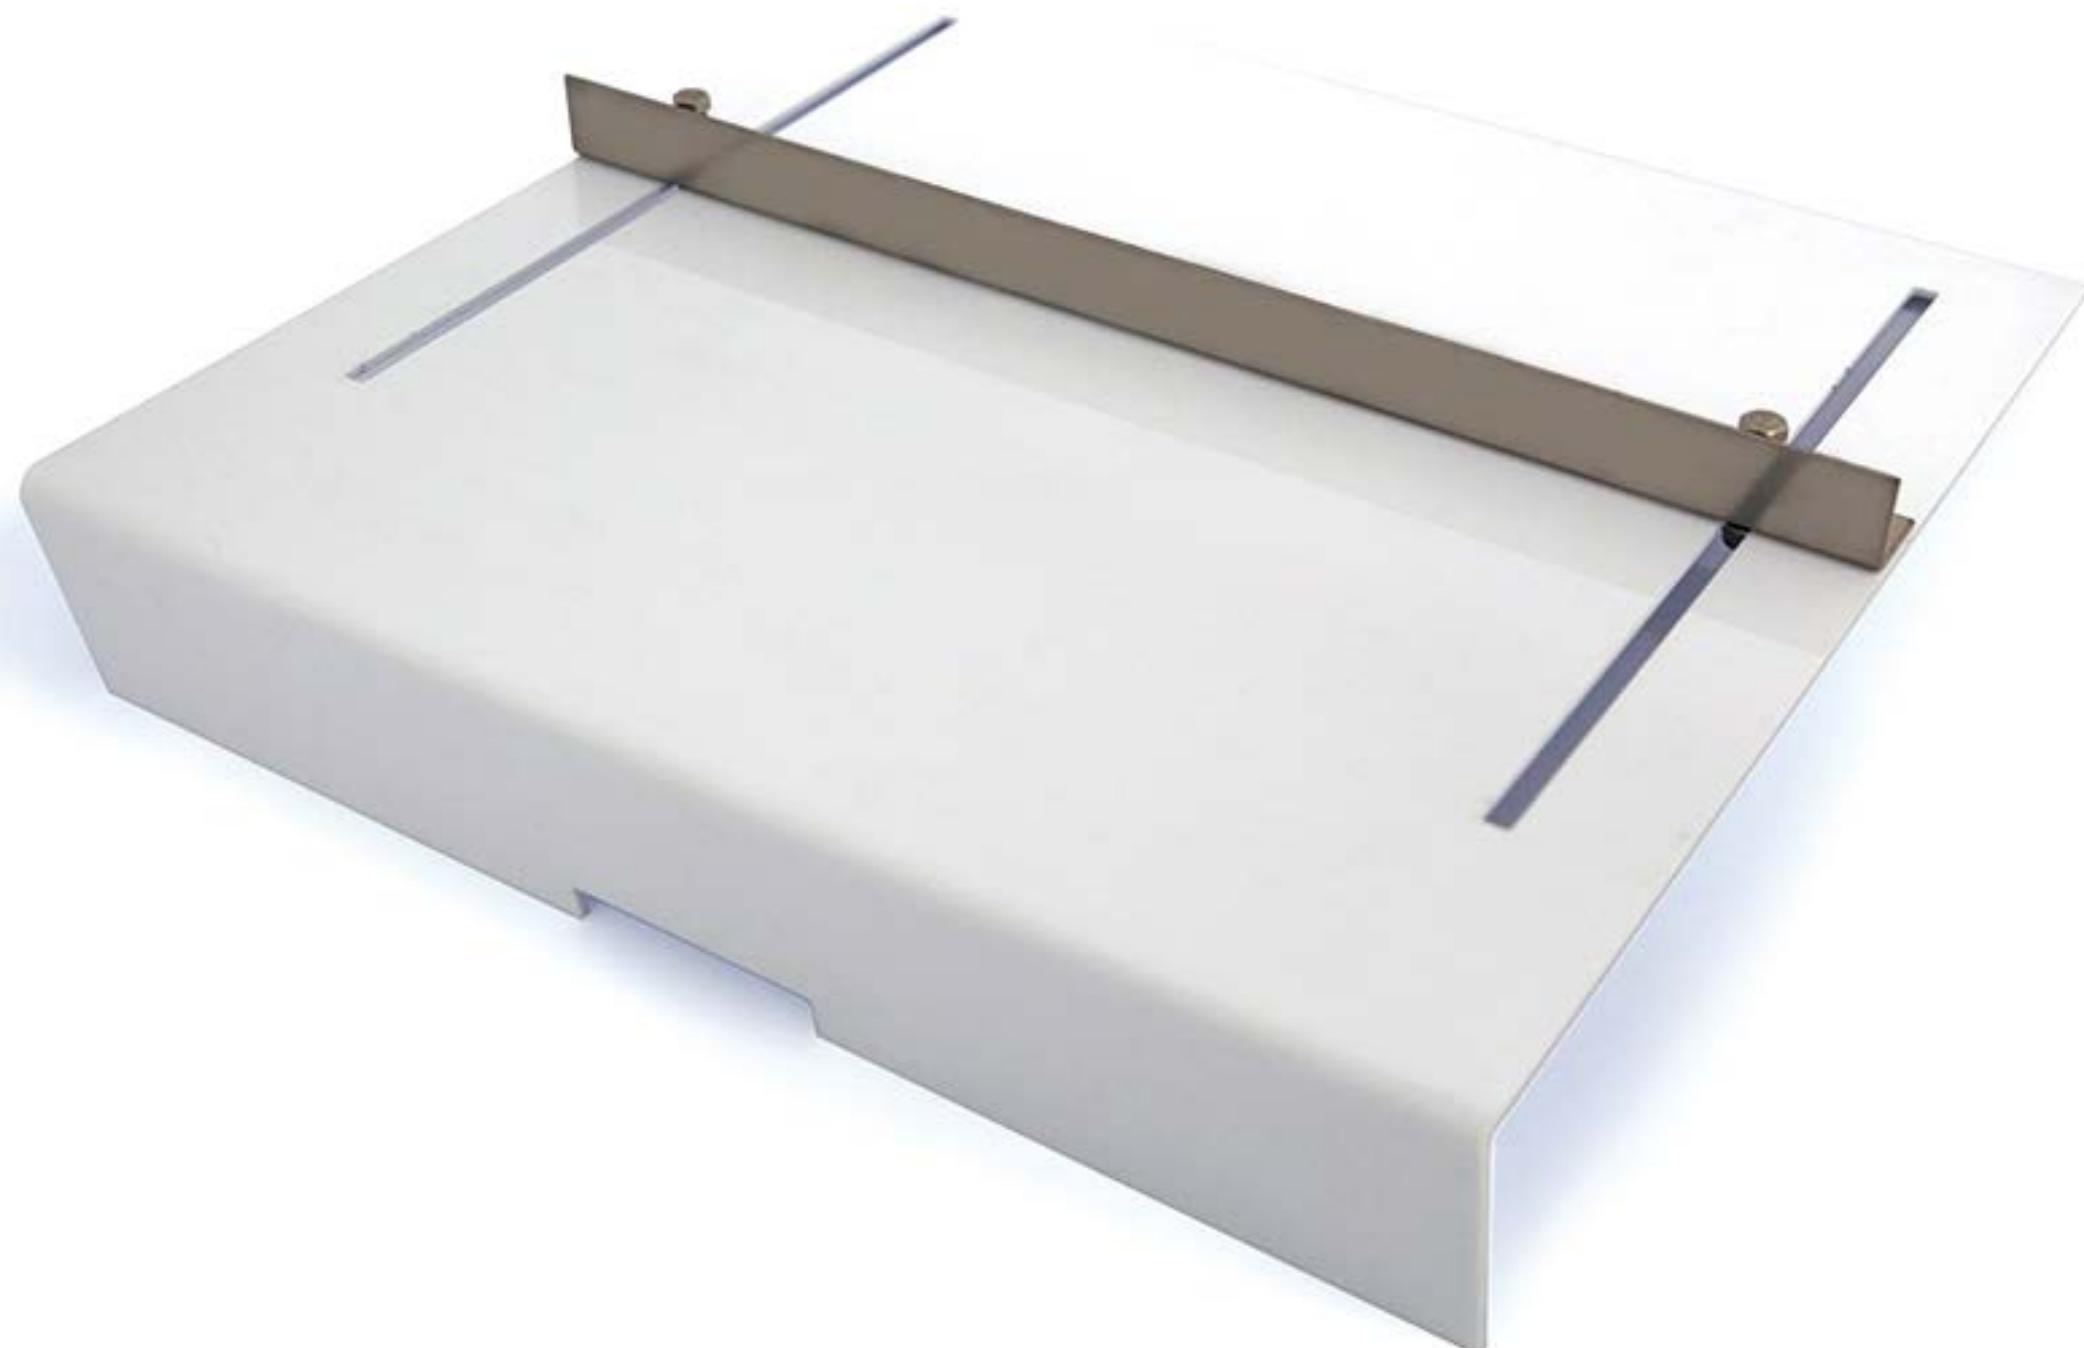

Bag cutting kit

By replacing the double sealing bar with the bag cutting kit, the excess bag will be automatically cut at the time it is sealed.

Accessories

Support for liquid packaging

Bracket that enables liquids to be placed in the proper position for packaging, preventing them from spilling during the process.

Accessories

Filler plates

The filler plates have a dual purpose. On the one hand, they allow for the positioning of the product at the proper height in order to obtain a perfect sealing. On the other hand, as there is less air in the chamber, better performance is achieved during the packaging process, as it allows for shortening the time to reach the desired vacuum.

Carriage-support for vacuum packers

The carriage-supports for vacuum packers are specifically designed for tabletop models from the 400 and 500 series and allow simple movement of the packer with its accessories. Manufactured in stainless steel, the carriage-supports are robust and are equipped with wheels.
